

The so-called **BIG Project of the Bajza** under the **ERASMUS+** partnership programme was realized on 21 November 2018. Trees were planted all along the street behind the school to form a green alley.

As part of the <http://www.ecoschools.global/> programme our Erasmus Committee chose to carry out the sub-topics of **Biodiversity and Recreation**.

By planing these trees

- we made a big step towards improving biodiversity in our surrounding → the success of this activity made the Erasmus team decide to plant some more trees in the schoolyard during this year
- we finished the 1st phase of the eco-steps: 1) we established selective garbage collection, 2) started a mini zoo (BajZoo) and 3) created the Bajza-alley.

the „Dutch group”

the „Greek group”

The local TV and press and the Facebook site of the school informed the people of our town about this act: that the participant students – approx. 100 students, 1 / 5th of the total - are proud of:
